

Vidath Dassanayake

DEVOPS & SOFTWARE ENGINEER

Colombo, Sri Lanka | +94 71 147 9009 | email: hello@vidathdassanayake.me
portfolio: vidathdassanayake.me | github.com/VidathVi | linkedin.com/in/vidathdassanayake

PROFESSIONAL SUMMARY

DevOps and software engineer building cloud-native systems on GCP with Kubernetes, Terraform, and CI/CD. Experienced in container optimization and infrastructure as code (IaC).

EDUCATION

Informatics Institute of Technology (IIT) 2024 – Present
BSc (Hons) Computer Science

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C
Tools & Databases: Git, Linux, PostgreSQL, Redis, Unity 6, Unreal Engine 5, Blender
Cloud & DevOps: Docker, Kubernetes, GCP, CI/CD, Terraform, Helm, Prometheus, Grafana
Frameworks & Libraries: Next.js, React, Node.js, Express.js, Prisma ORM, BullMQ

PROJECTS & EXPERIENCE

OreanStudio (Orean 360 Platform) | Full-Stack & DevOps Engineer 2025 – 2026

Technologies: Kubernetes, Terraform, GKE, Next.js, Express.js, PostgreSQL, Helm, Kong API Gateway, GitHub Actions

- Built a social media automation app.
- Implemented KEDA-driven autoscaling for BullMQ workers, scaling from 0 to 10 pods based on Redis queue depth.
- Configured a stateless Kong API gateway on GKE ingress to authenticate requests via JWT validation.
- Provisioned subnets, Google Artifact Registry repositories, and GKE nodes on GCP with Terraform.
- Reduced Docker image size by 90% using multi-stage builds, speeding up deployments.
- Automated zero-downtime DB migrations and Helm chart deployments via GitHub Actions CI/CD pipeline.

GEO Engine (Zero-Cost LLM Pipeline) 2025 – 2026

Technologies: Python, WSL2, PyTorch, Unsloth, Docker Compose, ProtonVPN

- Built an application that optimizes content for generative engines (similar to SEO but instead of search engines like Google, it focuses on ChatGPT, Gemini, etc.).
- Engineered a VPN-rotation scraping pipeline in WSL2 to bypass Reddit/LinkedIn rate limits, enabling large-scale data collection.
- Fine-tuned a 7B-parameter LLM on a free Colab T4 GPU using 4-bit quantization, keeping total cost at \$0.
- Deployed fine-tuned model serverlessly on Modal with auto-shutdown, maintaining \$0 hosting cost.

3D Interactive Arcade Simulator | Game Developer & Project Manager 2025

Technologies: C#, Unity 6, Blender

- Shipped a LEGO-themed first-person arcade simulator in Unity 6 with 3 playable mini-games.
- Programmed a custom first-person controller in C#.
- Modeled assets in Blender, rigged characters, and imported animations.
- Used Unity physics materials to script elastic collisions for the air hockey mini-game.

SOFT SKILLS

Problem Solving, Team Collaboration, Adaptability, Critical Thinking, Time Management, Leadership
