

VIDATH DASSANAYAKE

DevOps & Software Engineer

+94 71 147 9009 dassanayakevidath@gmail.com vidathdassanayake.me
linkedin.com/in/vidathdassanayake Colombo, Sri Lanka github.com/VidathVi

EDUCATION

BSc (Hons) Computer Science Informatics Institute of Technology (IIT)

2024 - Present

- Modules – Object-Oriented Programming (Java/Python), Web Development, Client-Server Architecture

Applied Mathematics & Pure Mathematics Kingswood College

2021 - 2023

PROJECTS

OreanStudio (Orean 360 Platform)

2025 - 2026

<https://github.com/VidathVi/SMMA-Final-Build>

- Built a social media automation app
- Implemented KEDA-driven autoscaling for BullMQ workers, scaling from 0 to 10 pods based on Redis queue depth
- Configured a stateless Kong API gateway on GKE ingress to authenticate requests via JWT validation
- Provisioned subnets, Google Artifact Registry repositories, and GKE nodes on GCP with Terraform
- Reduced Docker image size by 90% using multi-stage builds, speeding up deployments
- Automated zero-downtime DB migrations and Helm chart deployments via GitHub Actions CI/CD pipeline

GEO Engine (Zero-Cost LLM Pipeline)

2025 - 2026

<https://github.com/VidathVi/Fine-tune>

- Built an application that optimizes content for generative engines (similar to SEO but instead of search engines like Google, it focuses on ChatGPT, Gemini, etc.)
- Engineered a high-concurrency scraping pipeline utilizing dynamic IP rotation and adaptive request throttles to handle strict target API limits
- Fine-tuned a 7B-parameter LLM on a free Colab T4 GPU using 4-bit quantization, keeping total cost at \$0
- Deployed fine-tuned model serverlessly on Modal with auto-shutdown, maintaining \$0 hosting cost

3D Interactive Arcade Simulator

2025

<https://github.com/VidathVi/3DArcadeProject>

- Shipped a LEGO-themed first-person arcade simulator in Unity 6 with 3 playable mini-games
- Programmed a custom first-person controller in C#
- Modeled assets in Blender, rigged characters, and imported animations
- Used Unity physics materials to script elastic collisions for the air hockey mini-game

Modly Blender Extension

2026

https://github.com/VidathVi/Modly_blender_extension

- Developed a Blender 5.2 add-on to run Modly's local AI 3D generation from a custom Node Graph
- Built a dynamic node tree that generates custom UI components by parsing JSON manifests
- Isolated the AI backend in a background FastAPI process to prevent GPU conflicts with Blender

SUMMARY

DevOps and software engineer with experience in Object oriented programming with java and python, and building cloud-native systems on GCP with Kubernetes, Terraform, and CI/CD. Experienced in OOP, container optimization, and infrastructure as code (IaC).

SKILLS

Languages

Java Python TypeScript JavaScript
C# C

Tools & Databases

Git Linux SQL PostgreSQL Redis
Unity 6 Unreal Engine 5 Blender

Cloud & DevOps

Docker Kubernetes GCP CI/CD
Terraform Helm Prometheus Grafana

Frameworks & Libraries

Next.js React Node.js Express.js
Prisma ORM BullMQ
