PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience building cloud-native systems on GCP with Kubernetes, Terraform, and CI/CD, seeking to grow those skills further in a DevOps engineering team.

TECHNICAL SKILLS

Cloud & DevOps:	Docker, Kubernetes, GKE, GCP, Terraform, Helm, GitHub Actions, KEDA, Kong, Bash, CI/CD
Languages:	Java, Python, TypeScript, JavaScript, C# (Unity)
Frameworks & Libraries:	Next.js, React, Node.js, Express.js, Prisma ORM, BullMQ
Databases:	PostgreSQL, Redis, SQL
Monitoring & Observability:	Prometheus, Grafana
Other:	Postman, Unity 6, Blender, Git, Linux

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Kubernetes, Terraform, GKE, Next.js, Express.js, PostgreSQL, Helm, Kong API Gateway, GitHub Actions, KEDA, BullMQ, Redis

- Built and shipped a social media automation SaaS platform on GKE, serving concurrent multi-tenant workloads.
- Architected a custom GCP VPC with dedicated subnets, secondary IP ranges for GKE pods/services, and Cloud NAT for private node outbound access; configured GKE Ingress with a managed Google Cloud Load Balancer (L7) and GKE-managed TLS certificates for public traffic routing.
- Implemented KEDA-driven autoscaling for BullMQ workers, scaling from 0 to 10 pods based on Redis queue depth.
- Monitored cluster and service health with Prometheus and Grafana dashboards, tracking key metrics and enabling alerting across the multi-tenant platform.
- Implemented JWT-based authentication and API gateway security policies with Kong.
- Provisioned GCP subnets and configured least-privilege access via Terraform.
- Reduced Docker image size by 90% using multi-stage builds, cutting deployment time significantly.
- Automated zero-downtime DB migrations and Helm chart deployments via GitHub Actions CI/CD pipeline.
- Authored a technical case study documenting the platform's architecture, cloud infrastructure, security model, and integrations.
- Collaborated with a 6-member engineering team using Agile/Scrum and Notion for task tracking to design and ship the platform.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, Docker Compose, PyTorch, Unsloth, WSL2, Modal

- Engineered a high-concurrency scraping pipeline with dynamic IP rotation and adaptive throttling to handle strict API rate limits.
- Fine-tuned a 7B-parameter LLM on a free Colab T4 GPU using 4-bit quantisation, keeping total compute cost at \$0.
- Deployed fine-tuned model serverlessly on Modal with auto-shutdown, maintaining \$0 hosting cost.
- Containerised the full pipeline with Docker Compose for reproducible local development.

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation via a custom Node Graph, isolating the AI backend in a background FastAPI process to prevent GPU conflicts.

CERTIFICATIONS

Boot.dev: [Docker](#), [Git](#), [Linux](#), [SQL](#), [Python](#), [OOP in Python](#)

LANGUAGES

English:	Fluent
Sinhala:	Native

EDUCATION

Informatics Institute of Technology (IIT) – BSc (Hons) Computer Science · Year 3 of 4 · Expected graduation: 2028

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development

Kingswood College – A/Ls: Applied Mathematics & Pure Mathematics (2021 – 2023)
