PROFESSIONAL SUMMARY

Computer science undergraduate with hands-on experience in SQL data management, automated pipeline reliability, and cloud-native systems on GCP. Comfortable debugging distributed systems, writing data validation queries, and communicating technical issues clearly. Experienced working in Agile engineering teams to ship and maintain production systems.

TECHNICAL SKILLS

Databases & SQL: SQL, PostgreSQL, MongoDB, Redis
Languages: Python, Java, TypeScript, JavaScript
Tools: Git, Linux, Bash, Docker, GitHub Actions
Frameworks & Libraries: Next.js, Node.js, Express.js, Prisma ORM, BullMQ
Infrastructure background: Kubernetes, GCP, Terraform, Helm, Kong API Gateway

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: PostgreSQL, Redis, SQL, Node.js, Express.js, Prisma ORM, BullMQ, Docker, GitHub Actions, GKE

- Diagnosed and resolved BullMQ worker and Redis queue failures in a multi-tenant SaaS platform, tracing root causes through logs and queue state to restore normal processing.
- Wrote SQL queries against the PostgreSQL database to verify data consistency during incidents and after schema changes.
- Automated zero-downtime database migrations via GitHub Actions CI/CD, ensuring data integrity was maintained across every release with no manual intervention.
- Reduced Docker image size by 90% using multi-stage builds, improving deployment reliability and environment reproducibility.
- Collaborated with a 6-member Agile/Scrum team, participating in sprint planning and incident retrospectives throughout development.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, Playwright, Docker Compose, PyTorch, WSL2, Modal

- Built a resilient scraping pipeline in Python with automatic retry logic and adaptive throttling, handling transient failures and API rate-limit errors without data loss.
- Used Playwright for browser automation to drive and validate multi-step data extraction, with explicit checks on page state before each operation to catch failures early.
- Fine-tuned a 7B-parameter LLM on a free Colab T4 GPU (\$0 cost) and deployed it serverlessly on Modal with auto-shutdown.

3D Interactive Arcade Simulator

2025

Technologies: C# (Unity), Unity 6, Blender

- Shipped a LEGO-themed first-person arcade simulator with 3 mini-games; debugged physics edge cases and playtested collision behaviour with a 3-member team.

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation, isolating the AI backend in a FastAPI process to prevent GPU resource conflicts.

LANGUAGES

English: Fluent
Sinhala: Native

EDUCATION

Informatics Institute of Technology (IIT) – BSc (Hons) Computer Science · Year 3 of 3 · Expected graduation: 2024 – Present 2028

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development

Kingswood College – A/Ls: Applied Mathematics & Pure Mathematics (2021 – 2023)
