PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience building cloud-native systems on GCP with Kubernetes, Terraform, and CI/CD, seeking to grow those skills further in a DevOps engineering team.

TECHNICAL SKILLS

Cloud & DevOps:	Docker, Kubernetes, GKE (Standard), GCP, Terraform, Helm, GitHub Actions, Kong, Bash, CI/CD
Languages:	Java, Python, TypeScript, JavaScript, C# (Unity), HTML, CSS, OOP
Frameworks & Libraries:	Next.js, React, Node.js, Express.js, Prisma ORM
Databases:	PostgreSQL, Redis, SQL
Monitoring & Observability:	Prometheus, Grafana, Alertmanager, Fluent Bit
Other:	Postman, Unity 6, Blender, Git, Linux

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Kubernetes, Terraform, GKE, Next.js, Node.js, Docker, Express.js, TypeScript, PostgreSQL, Helm, Kong API Gateway, GitHub Actions, KEDA, BullMQ, Redis, Prometheus, Grafana

- Built and deployed a social media automation platform (Next.js, Node.js/Express, PostgreSQL, BullMQ) to GKE Standard on GCP (asia-southeast1) using Terraform, Helm and GitHub Actions.
- Provisioned GCP with Terraform modules (networking, GKE) and GCS remote state with locking and per-environment workspaces: custom VPC with pod and service secondary IP ranges, Cloud NAT for private nodes, and a Terraform-managed e2-medium node pool.
- Routed traffic through a DB-less Kong gateway (JWT verification, rate limiting, path routing) behind a GCE load balancer with a managed SSL certificate; packaged the platform as 5 Helm charts.
- Implemented KEDA-driven autoscaling for BullMQ workers, scaling from 0 to 10 pods based on Redis queue depth (one pod per five queued jobs).
- Deployed kube-prometheus-stack (Prometheus, Grafana, Alertmanager routing to Slack and email) and a Fluent Bit DaemonSet shipping container logs to Cloud Logging.
- Built 3 GitHub Actions pipelines: PR checks (ESLint, type-check, Docker builds), staging deploys, and GKE production deploys (Prisma migrations, then Helm releases with atomic rollback and a rollout-status check).
- Cut the frontend Docker image from 1.5 GB to ~150 MB (90%) using a three-stage node:20-alpine build; containers run as non-root users.
- Ran the Node.js 20 API and BullMQ workers from one container image (worker mode via ENABLE_WORKERS), removing a second image to build and store.
- Authored a technical case study documenting the platform's architecture, cloud infrastructure, security model, and integrations.
- Collaborated with a 6-member engineering team using Agile/Scrum and Notion for task tracking to design and ship the platform.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, Docker Compose, PyTorch, Unsloth, Qwen2.5, LoRA, vLLM, Firecrawl, WSL2, Modal

- Built a Python scraping pipeline with self-hosted Firecrawl in Docker and round-robin IP rotation across three free VPN regions (via WSL2), with 10–25 second request delays for LinkedIn scraping.
- Fine-tuned Qwen2.5-7B-Instruct with LoRA (Unsloth, 4-bit) on a free Google Colab T4 GPU; training loss fell from 1.84 to 0.96 at \$0 compute cost.
- Served the merged model with vLLM on Modal (A10G GPU, scale-to-zero after 120 seconds idle) behind an OpenAI-compatible API, within Modal's free credit tier.
- Ran the self-hosted Firecrawl scraper under Docker Compose, slimmed for a desktop (pre-built ghcr.io images, FoundationDB removed, relaxed RabbitMQ health checks).

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation via a custom Node Graph, isolating the AI backend in a background FastAPI process to prevent GPU conflicts.

CERTIFICATIONS

IBM SkillsBuild: [Cloud Computing Fundamentals](#)

Cisco: [Python Essentials 2](#)

Boot.dev: [Docker](#), [Git](#), [Linux](#), [SQL](#), [Python](#), [OOP in Python](#)

DataCamp: Java, Java OOP

LANGUAGES

English: Fluent

Sinhala: Native

EDUCATION

Informatics Institute of Technology (IIT)

2024 – Present

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development
