PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience in CI quality checks, defect diagnosis and documentation, data cleaning and validation, and Playwright browser automation, gained while shipping production-style, cloud-native systems in Agile teams.

TECHNICAL SKILLS

Testing & QA: Playwright (browser automation), GitHub Actions (CI lint, type-check, build), Postman, SQL
Languages: Java, Python, TypeScript, JavaScript, C# (Unity), HTML, CSS, OOP
Frameworks & Libraries: Next.js, React, Node.js, Express.js, Prisma ORM
Databases: PostgreSQL, Redis, SQL
Other: Docker, GitHub Actions, Git, Linux, Bash, Unity 6, Blender, MS Office

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Next.js, Node.js, TypeScript, ESLint, Express.js, PostgreSQL, BullMQ, Redis, Docker, GitHub Actions, Kubernetes, Terraform, Helm

- Built and shipped a social media automation SaaS platform, collaborating in a 6-member Agile/Scrum team across the full development lifecycle.
- Built a GitHub Actions CI workflow for a Node.js/TypeScript codebase that runs ESLint, TypeScript type-checking and Docker build verification on every pull request to dev, staging and main; extended the pipeline with Prisma migrations and Helm deployments with rollout verification and automatic rollback.
- Diagnosed and resolved 23 documented issues across two projects (symptom, root cause, fix), including unprotected dashboard routes, a liveness-probe path mismatch that caused pod restarts, and an exposed API key (revoked and purged from git history with git filter-repo).
- Cut the frontend Docker image from 1.5 GB to ~150 MB (90%) using a three-stage node:20-alpine build.
- Provisioned cloud infrastructure with Terraform using separate workspaces per environment; staging runs the same container images as production.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, Playwright, Firecrawl, Qwen2.5, vLLM, PyTorch, Unsloth, Docker Compose, WSL2, Modal

- Built a session manager that injected authenticated session cookies into Playwright headers, with 10–25 second request delays to stay within rate limits.
- Cleaned and validated the scraped data (minimum-length filter, deduplication, spam and all-caps removal, PII stripping) down to 374 records, formatted as ChatML and split 299/37/38 into train, validation and held-out test sets.
- Fine-tuned Qwen2.5-7B-Instruct with LoRA (Unsloth, 4-bit) on a free Colab T4 (training loss 1.84 to 0.96) and served it with vLLM on Modal with scale-to-zero, within free credit tiers.
- Ran the self-hosted Firecrawl scraper under Docker Compose, slimmed for a desktop (pre-built ghcr.io images, FoundationDB removed, relaxed RabbitMQ health checks).

3D Interactive Arcade Simulator

2025

Technologies: C# (Unity), Unity 6, Blender

- Shipped a LEGO-themed first-person arcade simulator with 3 mini-games; identified and logged defects across physics edge cases through structured playtesting of collision behaviour across all game modes, in a 3-member team.

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation via a custom Node Graph, with an isolated FastAPI backend to prevent GPU conflicts.

CERTIFICATIONS

IBM SkillsBuild: [Cloud Computing Fundamentals](#)

Cisco: [Python Essentials 2](#)

Boot.dev: [Docker](#), [Git](#), [Linux](#), [SQL](#), [Python](#), [OOP in Python](#)

DataCamp: Java, Java OOP

LANGUAGES

English: Fluent
Sinhala: Native

EDUCATION

Informatics Institute of Technology (IIT) – BSc (Hons) Computer Science · Year 3 of 4 · Expected graduation: 2024 – Present
2028

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development

Kingswood College – A/Ls: Applied Mathematics & Pure Mathematics (2021 – 2023)
