PROFESSIONAL SUMMARY

Computer Science undergraduate who delivered a SaaS platform with a 6-person Agile/Scrum team from design to deployment. Seeking a 6-12-month PM & BA internship.

EDUCATION

Informatics Institute of Technology (IIT) – BSc (Hons) Computer Science · Year 3 of 4 · Expected graduation: 2024 – Present 2028

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development

TECHNICAL SKILLS

Business Analysis & PM: Requirements Gathering, Use Case Specification, Stakeholder Interviews, Requirements Prioritisation, Requirements Validation, Agile/Scrum, SDLC, Project Documentation, Manual Functional Testing

Languages: Java, Python, TypeScript, JavaScript, C# (Unity), HTML, CSS, OOP

Frameworks & Libraries: Next.js, React, Node.js, Express.js, Prisma ORM

Databases: PostgreSQL, Redis, SQL

Cloud & DevOps: Docker, Kubernetes, GKE, GCP, Terraform, Helm, GitHub Actions, Kong

Other: Postman, Notion, Unity 6, Blender, Git, Linux, Bash

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Next.js, Node.js, Express.js, TypeScript, PostgreSQL, Prisma ORM, BullMQ, Redis, Kubernetes, GKE, Terraform, GitHub Actions

- Coordinated work across a 6-member team by tracking tasks in Notion and running sprint planning, delivering the platform from design through to deployment.
- Validated the platform through manual functional testing, cross-browser (Chrome, Firefox, Edge) and responsive testing, and feedback from end users, a domain expert, industry experts and the IIT project showcase.
- Documented 23 issues across two projects (symptom, root cause, fix), including unprotected dashboard routes, a liveness-probe path mismatch that caused pod restarts, and an exposed API key that was revoked and purged from git history.
- Built the full-stack platform in TypeScript (Next.js 16, Express 5, Prisma, PostgreSQL), including six OAuth integrations and BullMQ scheduled publishing with retries and audit logs.
- Automated deployments to GKE with GitHub Actions CI/CD (Prisma migrations, Helm releases, atomic rollback) and KEDA-based autoscaling.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, PyTorch, Qwen2.5, LoRA, vLLM, Firecrawl, Docker Compose, Modal

- Built an end-to-end pipeline that collected, cleaned and validated 374 records (deduplication, spam filtering, PII stripping) and split them into train, validation and test sets.
- Fine-tuned Qwen2.5-7B-Instruct with LoRA and deployed it with vLLM on Modal as an API used by the Orean backend, entirely within free tiers (\$0 compute).

3D Interactive Arcade Simulator

2025

Technologies: C# (Unity), Unity 6, Blender

- Identified and logged defects across physics edge cases through structured playtesting of collision behaviour across all game modes, for a LEGO-themed first-person arcade simulator with 3 mini-games built in a 3-member team.

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation, with an isolated FastAPI backend to prevent GPU conflicts.
