

Vidath Dassanayake

DEVOPS & SOFTWARE ENGINEER

Colombo, Sri Lanka | +94 71 147 9009 | email: hello@vidathdassanayake.me

portfolio: vidathdassanayake.me | github.com/VidathVi | linkedin.com/in/vidath-dassanayake

EDUCATION

Informatics Institute of Technology (IIT)

2024 – Present

BSc (Hons) Computer Science

TECHNICAL SKILLS

Languages:	Python, TypeScript, JavaScript, Java, C
Tools & Databases:	Git, Linux, PostgreSQL, Redis, Unity 6, Unreal Engine 6, Blender
Cloud & DevOps:	Docker, Kubernetes, GCP, CI/CD, Terraform, Helm, Prometheus, Grafana
Frameworks & Libraries:	Next.js, React, Node.js, Express.js, Prisma ORM

PROJECTS

Full-Stack & DevOps Engineer | OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Terraform, GKE, Next.js 16, Express.js 5, PostgreSQL, Redis, BullMQ, Helm, GitHub Actions

- Built a multi-tenant social media automation app.
- Scaled background workers to zero using BullMQ and KEDA, spinning up to 10 pods dynamically based on Redis queue sizes.
- Deployed a DB-less Kong Gateway configuration at GKE cluster ingress to validate JWT signatures at the edge.
- Provisioned subnets, Google Artifact Registry repositories, and GKE nodes on GCP with modular Terraform templates.
- Cut Next.js Docker image size by 90% (from 1.5 GB to 150 MB) by optimizing standalone container configurations.
- Automated database migrations and Helm upgrades for GKE using GitHub Actions.

Lead ML Pipeline Developer | GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, WSL2, PyTorch, Unsloth, Docker Compose, ProtonVPN

- Built a zero-cost pipeline to scrape, clean, and format data for fine-tuning Qwen-2.5-7B.
- Bypassed Reddit and LinkedIn rate limits by rotating ProtonVPN in WSL2 and injecting cookie headers.
- Fine-tuned Qwen-2.5-7B on a Colab T4 GPU. Used Unsloth 4-bit weights to bypass RAM limits and fit the 5.5 GB model in memory.
- Hosted the model weights serverlessly on Modal using vLLM, with a scale-to-zero timeout to avoid hosting fees.

Game Developer & Project Manager | 3D Interactive Arcade Simulator

2025

Technologies: C#, Unity 6, Blender

- Collaborated in a team of three to build a first-person LEGO-themed 3D arcade simulator in Unity.
- Programmed a custom first-person controller in C#.
- Modeled assets in Blender, rigged characters, and imported animations.
- Used Unity physics materials to script elastic collisions for the air hockey mini-game.
