PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on QA experience in browser automation with Playwright, CI-integrated test pipelines, and SQL-based data validation, gained while shipping production-style, cloud-native systems in Agile teams.

TECHNICAL SKILLS

Testing & QA: Playwright, Postman, GitHub Actions (CI test runs), SQL (data validation)
Languages: Java, Python, TypeScript, JavaScript, C# (Unity), HTML, CSS
Frameworks & Libraries: Next.js, React, Node.js, Express.js, Prisma ORM, BullMQ
Databases: PostgreSQL, Redis, SQL
Other: Docker, GitHub Actions, Git, Linux, Bash, Unity 6, Blender, MS Office

PROJECTS

OreanStudio (Orean 360 Platform)

2025 – 2026

Technologies: Next.js, Express.js, PostgreSQL, BullMQ, Redis, Docker, GitHub Actions, Kubernetes, Terraform, Helm

- Built and shipped a social media automation SaaS platform, collaborating in a 6-member Agile/Scrum team across the full development lifecycle.
- Built a CI pipeline (GitHub Actions) that runs linting, type-checking, and build verification on every pull request, blocking broken code from merging; extended the pipeline with automated zero-downtime DB migrations and Helm chart deployments as release quality gates.
- Identified and resolved 20+ technical issues across both projects, documenting each by symptom, root cause, and fix — including catching an authentication bypass and an exposed credential before release.
- Reduced Docker image size by 90% using multi-stage builds, improving build reproducibility and deployment consistency.
- Provisioned infrastructure via Terraform, ensuring environment parity between staging and production.

GEO Engine (Zero-Cost LLM Pipeline)

2025 – 2026

Technologies: Python, Playwright, PyTorch, Unsloth, Docker Compose, WSL2, Modal

- Built a session manager that authenticated and injected cookies into Playwright headers, with request pacing to avoid rate limits and detection, driving and validating the content-scraping pipeline end-to-end.
- Built adaptive request throttling and automatic retry logic to handle scraping failures and strict API rate limits gracefully.
- Fine-tuned a 7B-parameter LLM on a free Colab T4 GPU using 4-bit quantisation (\$0 compute cost) and deployed it serverlessly on Modal with auto-shutdown.
- Containerised the full pipeline with Docker Compose for reproducible, consistent local development.
- Applied AI/LLM tooling within an automated pipeline that combined testing, validation, and deployment stages.

3D Interactive Arcade Simulator

2025

Technologies: C# (Unity), Unity 6, Blender

- Shipped a LEGO-themed first-person arcade simulator with 3 mini-games; identified and logged defects across physics edge cases through structured playtesting of collision behaviour across all game modes, in a 3-member team.

Modly Blender Extension

2025

Technologies: Python, Blender Python API (bpy), FastAPI

- Developed a Blender 5.2 add-on integrating Modly's local AI 3D generation via a custom Node Graph, with an isolated FastAPI backend to prevent GPU conflicts.

CERTIFICATIONS

Boot.dev: [Docker](#), [Git](#), [Linux](#), [SQL](#), [Python](#), [OOP in Python](#)

LANGUAGES

English: Fluent
Sinhala: Native

EDUCATION

Informatics Institute of Technology (IIT) – BSc (Hons) Computer Science · Year 3 of 4 · Expected graduation: 2024 – Present 2028

Modules – Object-Oriented Programming (Java/Python), Databases, Client-Server Architecture, Web Development

Kingswood College – A/Ls: Applied Mathematics & Pure Mathematics (2021 – 2023)
